## 1.0 INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by Applied Environmental Technologies, Inc. (AET) for the property identified as the East Area 1 Specific Plan Area located at the east end of Santa Paula in Ventura County, California (Site) (Plate 1). We were informed that the Site consists of the Limoneira Ranch (approximately 434 acres of orchards, various structures, Barranca and hillsides), the Newsome Ranch (64 acres of orchard), and a 3-acre parcel that contains an existing packinghouse that will remain as developed. The Site is hilly and rural. Addresses for the Site include 305 Padre Drive, 18249 Telegraph Road and 18201 Telegraph Road. Assessor Parcel Numbers for the Site include 040-0-180-435, 040-0-180-565, 107-0-200-115, and 107-0-045-015.

The objective of the Phase I ESA is to identify recognized environmental conditions at the Site. As defined in the American Society for Testing and Materials (ASTM) Designation E 1527-00, recognized environmental conditions include "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions."

The project was performed at the request of Mr. Mike Penrod of Parkstone Companies, in accordance with the scope of work outlined in the AET proposal dated December 19, 2006. The Phase I ESA was performed under the direction of a California State Registered Environmental Assessor qualified to perform the work. In general, the investigation included a review of current federal, state and county databases of known and potential environmentally impacted properties, a review of reasonably available city and county records, review of available historical aerial photographs and historical maps, and a Site reconnaissance to observe present Site conditions.

In addition, AET reviewed a previous limited Phase II assessment which was conducted in agricultural areas, near a pesticide storage shed, in the vicinity of an abandoned underground gasoline storage tank, and at above ground diesel and gasoline tanks in 2004. A current limited Phase II was conducted on the Newsome Ranch property in December 2006. Details of the methods of investigation, findings, and conclusions are provided herein.

## **2.0 SITE DESCRIPTION**

### **2.1 Property Description**

The Site consists of approximately 498 acres of citrus and avocado orchard, farm structures, residences, a Barranca and hillside. In addition, a 3-acre parcel containing a packinghouse was identified. Individual residences are present along the entrance road (Padre Lane) to the Site. The Site is currently covered with citrus and avocado orchards, row crops and undeveloped rural land covered with native vegetation.

### **2.2 Physiographic Description**

The Site elevation is approximately 300 to 600 feet above mean sea level (msl). The topographic gradient in the Site area is approximately 245 feet per-mile toward the south, as measured from the U. S. Geological Survey Santa Paula Peak 7.5-Minute Topographic Quadrangle.

### **2.3 Geology/Hydrogeology**

The site is within the Transverse Ranges geomorphic province of California. East-west trending ranges and intervening valleys characterize this province. The groundwater is generally unconfined in most of the Santa Paula area, but confined conditions can occur due to clay lenses.

Groundwater in the Site area flows to the south and ultimately to the Santa Clara River. Depth to groundwater changes with the amount of rainfall and river flow. At a property approximately 1 mile to the west, groundwater is present at approximately 20 feet below ground surface (same elevation as Highway 126).

### **3.0 INVESTIGATION METHODOLOGY AND FINDINGS**

#### **3.1 Federal and State Database Review**

A government database report, prepared by Environmental Data Resources (EDR) of Southport, Connecticut of available federal, state and county agency databases was reviewed to identify government regulated properties having known or potential recognized environmental conditions within the Site vicinity. The radii of investigation for the Federal and State agency Lists were selected in accordance with the ASTM Standards for Environmental Site Assessments (E-1527-05). A complete copy of the EDR report, dated December 20, 2006, is provided in Appendix A. A description of the government databases reviewed is detailed in the EDR report. Also included in the EDR report is a base map illustrating the location of listed properties relative to the location of the Site.

A summary of properties that could not be mapped by EDR due to poor or inadequate address information (orphan properties) is also included in the EDR report. None of the orphan properties can be identified to be within the immediate Site vicinity. The pertinent findings of the government database review are summarized below.

- The Site (Teague McKeveatt at 18249 Telegraph Road, Santa Paula) is identified in the EDR report as an underground storage tank (UST) property. The facility status is listed as inactive. In a previous EDR report (December 8, 2004), three USTs were listed. Tank 1 (12,000-gallon capacity) was reportedly installed in 1969 and contained unleaded gasoline. Tank 2 (550-gallon capacity) was reportedly installed in 1940 and contained regular gasoline. Tank 3 (550-gallon capacity) was reportedly installed in 1985 and contained unleaded gasoline. In addition to the former underground tanks, the Site is listed as having an above ground tank (AST).
- There are no listed federal Superfund properties (National Priority List) identified within the one-mile study area.
- Several properties are located downgradient that are listed as having underground tanks or listed as a LUST (leaking underground storage tank) property. These properties are flank or downgradient and not expected to impact the Site.

#### **3.2 Oil and Gas Development**

The State Division of Oil and Gas, South Mountain Field Map No. 206 and the Munger Map Book of California-Alaska Oil and Gas Fields, 1990 Edition, were reviewed to assess the presence of known active or abandoned oil and gas wells within the Site vicinity. No production wells were identified. Several abandoned dry wells are within 1 mile of the property; however, none are within ¼ mile of the Site.

### **3.3 Agency Records Review**

#### **3.3.1 County of Ventura Environmental Health Division**

The County of Ventura Environmental Health Division Leaking Underground Fuel Tank Program (VCEHD LUFT) maintains records of reported leaking underground storage tanks. AET reviewed UST records of open and closed cases. The Site is not listed on any of these lists.

#### **3.3.2 County of Ventura Building and Safety Department**

The County of Ventura Building and Safety Department maintains available permit records for properties within the county. The address of 305 Padre Drive is listed for the Site. One record for a residential development was recorded in 1996. No records between 1940 and 1996 were present.

#### **3.3.3 City of Santa Paula Building and Safety Department**

The City of Santa Paula Building Department maintains available permit records for properties within the city. The address of 305 Padre Drive is listed for the Site. No records were listed for the Site.

### **3.4 Aerial Photograph, Sanborn Map and Topographic Map Review**

Copies of aerial photographs for the years 1945, 1959, 1964, 1977, 1989, 1994 and 2002; Sanborn Maps for the years 1923, 1929, 1950 and 1953; and topographic maps for the years 1903, 1951 and 1967, available from EDR, were reviewed by AET for historical land use identification. Based on the review of available aerial photographs, the historical development of the Site, and vicinity was evaluated and is summarized below. Copies of the aerial photographs, Sanborn Maps and topographic maps are contained in Appendix B.

The 1903 topographic map (scale = 1:62,500) shows the Site to contain several roads. No development is observed.

The 1923 and 1929 Sanborn Maps show the Site to have nine residences and numerous sheds and barns. At the southern end of the Site near Telegraph Road is a storage and curing facility (current packing house). The 1923 map shows a fuel oil reservoir across the private road on the southern border of the Site. The 1929 map shows that the reservoir is not used.

In the 1945 aerial photograph and 1951 topographic map, the Site is developed primarily for orchard. The eastern and northern areas of the Site are orchard. The western portion of the Site is undeveloped. Residential structures, barns, sheds and equipment are present near the center of the Site. The 1950 and 1953 Sanborn Maps show the packinghouse as a fruit washing and packing plant on Padre Drive. Agricultural land use is present across Highway 126 to the south and southwest.

The 1959 and 1964 aerial photographs, 1951 and 1967 topographic maps, and 1950 and 1953 Sanborn Maps show the development of orchards in the western and southwestern portions of the Site. Orchards are present on the adjacent properties to the east. The Sanborn Maps show the structures previously identified on the Site.

The 1977 aerial photograph shows more development of the western portion of the Site. The alignment of Highway 126 has changed.

The 1989 aerial photograph shows the Site to be very similar as it is currently. The alignment of Highway 126 is consistent with current conditions. The entire western portion of the Site is agricultural. Aerial photographs for the years 1994 and 2002 concur with the previous photograph.

There were no recognized environmental conditions identified during the aerial photograph review of the Site with the exception of the fuel oil reservoir. Some leakage or spillage may have occurred during its use. Fuel oil is not expected to create a significant environmental concern.

### **3.5 Site Reconnaissance**

AET personnel visited and observed the Site for existing or potential recognized environmental conditions on December 27, 2006. Representative photographs taken of the Site are provided in Appendix C. The Site consists of undeveloped rural hilly land, avocado and citrus orchard, row crops and various structures. The structures include residences, office, barns and sheds for storage.

At the entrance to the Site (Padre Drive), nine residences are present. In addition, storage sheds, barns and other outbuildings are present. A small office is present. A single-family dwelling is present in the western portion of the Site within the orchard. A maintenance shed is present to the west of the residences. Behind the maintenance shed is a storage building that had been used in the past to store pesticides. Equipment (tractors, wagons) and miscellaneous materials (inert) are present around these locations.

The majority of the Site contains orchard. Citrus and avocado trees are present. Some acreage is graded pending future planting or development. Highway 126 binds the Site on the south, by a riparian corridor (Santa Paula Creek) on the west, on the north by undeveloped rural mountainous terrain, and on the east by an intermittent creek in Orcutt Canyon and orchards. The Newsome Ranch Property contains citrus and avocado orchards.

Several groundwater wells are present on the Site. The wells are accompanied by above ground tanks (AST) containing diesel that fuel the well pumps. The northern most well has an adjacent tank containing water that is covered with by a corrugated steel building. No staining or other indication that spillage or leaking has occurred from these tanks was observed.

In addition, one 1,000-gallon capacity AST was present that contained gasoline. We were informed that the fuel is used for farm vehicles.

Associates Insectary of Santa Paula furnishes the Site's pesticide needs. No banned pesticides are used on the Site based on verbal information provided to AET.

At the entrance to the Ranch is the packinghouse (address is listed as 18201 Telegraph Road). No entry to the packinghouse was made as the gate was locked. According to the mailboxes at the entrance, there are three tenants in the packinghouse property. The tenants include Canary Cars, MF Egan, and an unknown third tenant. The property was observed from the entrance area. The Site contained a packinghouse, several out buildings and numerous cars and vans that appear unused.

No evidence of underground storage tanks, significant staining, clarifiers, pits, ponds or stressed vegetation was observed during the Site visit.

### **3.6 Adjacent Property Reconnaissance**

Adjacent properties were observed for evidence of recognized environmental conditions. The adjacent properties on the west and east are developed primarily with orchards. Some residential development is present to the west. To the north is undeveloped rural land. Commercial development is south and southwest.

### **3.7 Phase II Assessments**

#### **3.7.1 December 2004 Assessments**

Mr. Ronald Hendren, Vice President of Limoneira Company identified the location of a former underground gasoline tank, aboveground diesel tanks for generators for well pumps, pesticide storage shed, and a general Site layout.

The Phase II was conducted in four parts. The existing agricultural areas (within the 434 acres) were sampled for pesticides. The soil adjacent to the current pesticide storage shed was also sampled for pesticides. The area of the former underground fuel tanks was sampled for fuel hydrocarbons and volatile organics. Several areas around the Site adjacent to above ground diesel tanks were sampled for petroleum hydrocarbons as diesel.

#### Limoneira Agricultural Areas

Seventy-six soil samples were collected from the agricultural areas. Four samples from contiguous areas were composited into a single sample (resulting in 19 samples, C-1 through C-4 and C-6 through C-20). The 19 samples were analyzed for total chlorinated pesticides according to EPA Method 8080.

The results of the analyses are shown on Table 1 and attached in Appendix D. In summary, gamma-chlordane concentrations ranged from not detected (at method detection limits) to 30.3 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ). Alpha-chlordane concentrations ranged from not detected to 29.1  $\mu\text{g}/\text{kg}$ . DDT concentrations ranged from not detected to 8.14  $\mu\text{g}/\text{kg}$ . DDT's metabolites, DDD and DDE, concentrations ranged from not detected to 46.7 and 18.44  $\mu\text{g}/\text{kg}$ , respectively.

### Pesticide Shed

Eight soil samples were collected from adjacent to the pesticide storage shed. The samples were composited into 2 samples (SC-1 and SC-2) for analysis of pesticides by EPA Method 8080. The results showed no detectable concentrations of pesticides (Table 1). A copy of the laboratory results is attached to this report in Appendix D.

### Former Underground Tank Area

In the area of the former underground gasoline storage tanks, three borings were drilled (GP-1 through GP-3). The drilling was conducted by a geoprobe drill rig that hydraulically drives a 2-inch diameter rod into the soils where samples are collected. Due to the rocky nature of the soils, one boring was advanced to a total depth of 19 feet (GP-1). The remaining two borings were advanced to 10 feet. Several other borings were terminated at refusal at depths of 6 to 8 feet.

Soil samples were collected at 5-foot intervals beginning at 5 feet. Soil samples were obtained by driving a sampler with brass inserts into the relatively undisturbed subsurface soils. The soil samples were screened for volatile organic vapors using a photo ionization detector (PID) that detects volatile organics in the air. At each sampling interval, approximately 200 grams of soil was placed into a plastic Ziplock bag, sealed and allowed to equilibrate for approximately 20 minutes. The probe tip of the PID was inserted into the bag and the resultant concentration recorded. No volatile concentrations were recorded.

The samples were labeled and placed on ice for transportation to a state-certified laboratory for analysis. The soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-g), for volatile organic compounds (BTEX), and the five fuel oxygenates (TBA, DIPE, ETBE, TAME and MTBE) using EPA Method 8260B. No detectable concentrations of TPHg or volatile organics were measured. A copy of the laboratory results is attached to this report in Appendix D.

### Above Ground Diesel Tanks and Wind Machines

Random locations around the Site were sampled for petroleum hydrocarbons. Soil at the base of three above ground diesel tanks for water pumps (GP-4 through GP-6) and two wind machines (WM-1 and WM-2) were sampled. The samples were analyzed for total petroleum hydrocarbons as diesel and heavy oil by EPA Method 8015M/DHSLUFT. No detectable concentrations of hydrocarbons were measured. A copy of the laboratory results is attached to this report in Appendix D.

## **3.7.2 December 2006 Assessment**

### Newsome Orchard

A limited Phase II assessment for pesticides was conducted by AET in the orchard of the Newsome Ranch. AET collected 30 discrete soil samples and composited them within 6 approximate 10-acre areas. At each discrete location, a soil sample was collected from a depth of

between 6 and 12 inches below ground surface. The composite samples were delivered to American Scientific laboratories LLC of Los Angeles for analysis of total organochlorine pesticides according to EPA Method 8081A.

Five of the 6 samples contained no detectable concentration (at method detection limits) of any organochlorine pesticide (see Table 1). One sample (Newsome 5) contained only DDD at 4.71 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ) (Table 1). A copy of the laboratory results is attached to this report in Appendix D.

#### 4.0 SUMMARY AND CONCLUSIONS

Based on the findings of the ESA the following conclusions are presented:

- The Site is developed primarily with a citrus and avocado orchard. Various residential and storage structures are present. A portion of the Site (northern hillside) is undeveloped. Various above ground tanks containing diesel are present for running pumps and generators. An above ground tank for gasoline is present for use in farm equipment. No staining or other indication that spillage or leaking has occurred from these tanks was observed.
- The Site was identified on the federal, state and local agency databases of properties with known historical underground fuel tanks. No records were found for the abandonment of the tanks. According to Mr. Ronald Hendren, Limoneira Representative, the tanks were abandoned with no known contamination.
- A Phase II assessment was conducted in 2004 for the presence of contamination from the former tanks and from pesticide usage on the agricultural areas of the Limoneira portion of the Site (434 acres).

No concentrations of petroleum hydrocarbons were measured in the soil samples collected from the area of the former underground tanks or the above ground tanks. No impact is expected from the areas of the tanks.

Pesticides in the form of gamma and alpha chlordane and DDT and its metabolites were identified in the soils of the Limoneira Ranch Site. The maximum concentration of chlordane (gamma and alpha combined) was 59.4 µg/kg. This sample was a composite of 4 samples; therefore the greatest possible concentration of chlordane would be 237.6 µg/kg. According to the U.S. EPA Region 9 Soil Screening Preliminary Remediation Goals (PRGs), chlordane can be present at a concentration of 1,600 µg/kg in residential areas. Based on the U.S. EPA PRG value, environmental impact is not expected from the concentration of chlordane in the soil.

DDD, DDE and DDT were present at low concentrations, well below the PRG values listed for residential use (2400, 1700 and 1700 µg/kg, respectively). Based on the U.S. EPA PRG values, environmental impact is not expected from the concentration of DDT and its metabolites in the soil.

- An additional Phase II assessment was conducted in 2006 for the presence of contamination from pesticide usage on the agricultural area of the Newsome Ranch portion of the Site (64 acres).

Five of the 6 samples contained no detectable concentration of any organochlorine pesticide. One sample contained DDD at 4.71 micrograms per kilogram (µg/kg). As stated above, this concentration is well below the PRG values listed for residential use and is not expected to represent an environmental impact.

The concentrations of pesticides in the soil would not be expected to reduce the potential for the Site to be used for residential development. Additional assessment would likely be required if a school site were proposed for the Site. School sites in California require a Preliminary Endangerment Assessment (PEA). The requirements of the PEA would be regulated by the California Department of Toxic Substances Control (DTSC) and could include additional testing and risk assessments.

- Several properties are located downgradient that are listed as having underground tanks or listed as a LUST (leaking underground storage tank) property. These properties are flank or downgradient and not expected to impact the Site.

Based on the findings presented above, it is AET's opinion that there are no recognized environmental conditions at the Site, except for the low concentrations of pesticides that are determined to be below preliminary remediation goals set by the U.S. EPA Region 9 for residential development.

## **5.0 LIMITATIONS**

This report has been prepared for Parkstone Companies, as a Phase I and Limited Phase II Environmental Site Assessment of the property identified as the approximate 498 Acre Parcel, East Area 1 Specific Plan Area located at the east end of Santa Paula in the County of Ventura, California. Other parties may not rely on the information in this report without the written consent of AET. In performing the professional services, AET has applied present engineering and scientific judgment and used a level of effort consistent with the standard of practice measured on the date of this report and in the locale of the project site for similar type studies. Applied Environmental Technologies, Inc., makes no warranty, expressed or implied, in fact or by law, whether of merchantability, fitness for any particular purpose, or otherwise, concerning any of the materials or "services" furnished by Applied Environmental Technologies, Inc., to the client.

Inferences with respect to potential subsurface contamination consideration were based on AET's review of readily available government and historical records and a limited number of discrete soil samples. The findings and interpretations in this report have been developed based on the review of existing information pertaining to the site and a reconnaissance of the site. It should be recognized that subsurface contamination can vary laterally and with depth.

## EXECUTIVE SUMMARY

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### FEDERAL RECORDS

**RCRAInfo:** RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act ( RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

### STATE AND LOCAL RECORDS

**CORTESE:** This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 7 Cortese sites within approximately 0.5 miles of the target property.

**ENVIROSTOR:** The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## FEDERAL RECORDS

### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### **NPL RECOVERY:** Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

	Data Release Frequency: No Update Planned

### **CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 08/09/2006	Source: EPA
Date Data Arrived at EDR: 09/21/2006	Telephone: 703-603-8960

Number of Days to Update: 62	Next Scheduled EDR Contact: 03/19/2007
	Data Release Frequency: Quarterly

### **CERCLIS-NFRAP:** CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### **RCRA:** Resource Conservation and Recovery Act Information

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### **US INST CONTROL: Sites with Institutional Controls**

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/21/2006	Source: Environmental Protection Agency

## **US BROWNFIELDS: A Listing of Brownfields Sites**

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### **UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### **RAATS: RCRA Administrative Action Tracking System**

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

### **HAZNET: Facility and Manifest Data**

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

### **ENVIROSTOR: EnviroStor Database**

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## **EDR PROPRIETARY RECORDS**

### **Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.
