MANAGEMENT SUMMARY

An intensive Phase I archaeological survey was conducted for the East Gateway Specific Plan area, an approximately 27.4 acre study area near the City of Santa Paula in Ventura County, California. This investigation involved an archival records search, a review of existing published and unpublished references on local prehistory and history, and an on-foot, intensive survey of the study area. Archival records indicated that the study area had not been previously surveyed and that no archaeological sites had been recorded within the project. On-foot survey of the study area failed to result in the discovery of any unrecorded cultural resources. Development of the study area, therefore, does not have the potential to result in adverse impacts to cultural resources.

1.0 INTRODUCTION

At the request of Mr. Tony Locacciato of Impact Sciences, Inc., Camarillo, CA, an intensive Phase I archaeological survey was conducted for the East Gateway Specific Plan study area, Ventura County, California (Figure 1). The study area covers approximately 27.4 acres and it is located immediately west of a drainage ditch and the existing channel of Haun Creek and south of East Telegraph Road. Highway 126 bisects the study area within the northern portion of the subject property. Currently, the study area consists a vacant lot to the north of Highway 126 and row crops to the south.

The purpose of this Phase I archaeological survey was to provide a background review of pertinent previous research and an archival records search in order to establish whether any known archaeological sites were present in the project zone, and/or whether any systematic study of the project area had been conducted by archaeologists; an intensive, pedestrian or on-foot survey of the project area in order to identify any previously unrecorded cultural resources; and, should any be found within the subject property, a preliminary assessment of such resources. This manuscript constitutes a report on this Phase I archaeological study. Subsequent sections provide background to the investigation, including the results of the archival record search; a summary of the field surveying techniques employed; the results of the fieldwork; and management recommendations derived therefrom.

2.0 BACKGROUND TO THE PROJECT

2.1 Ethnographic Background

Ventura County, including the study area, lies within the territory of the Ventureño dialect of the Chumash ethnolinguistic group (Kroeber 1925). The Chumash were Hokan speaking people, who occupied the region from Topanga Canyon northwest to approximately San Luis Obispo. Because of their location in an area of early Spanish missionization, Chumash culture and life ways were heavily disrupted prior to any modern efforts at

ethnographic research, hence our knowledge of them is limited. However, based on fragmentary records and various means of inferential and analogical studies, a certain amount can be reconstructed about their way of life.

The Chumash followed a hunting-gathering-fishing subsistence pattern, which incorporated a heavy reliance on maritime resources, including pelagic and littoral fishes, and shellfish. Indeed, the bountiful sea resources that they exploited may have been a key factor in their evolutionary success (Landberg 1965): at the time of the arrival of the Spanish the Chumash had reached levels of population density, and complexities in social organization, unequalled worldwide by other non-farming groups (Moratto 1984:118). These included permanent coastal villages along the Channel Islands area containing as many as 1000 inhabitants (Brown 1967), as well as a hierarchical sociopolitical organization consisting of at least two major chiefdoms (Whitley and Beaudry 1991). Further, based on recent reconstructions using mission registers, the Chumash appear to have a matrilineal, and perhaps matrilineal, clan-based society (Johnson 1988).

The coastal Ventura County region, including the lower reaches of the Santa Clara Valley, was apparently a portion of a paramount Chumash capital at the village of *Muwu*, at modern Point Mugu (Whitley and Clewlow 1979; Whitley and Beaudry 1991). This served as the center of *Lulapin*, one of the two known historical chiefdoms, and was a domain whose limits stretched from the southeastern extreme of Chumash territory to Dos Pueblos, just beyond modern Santa Barbara. Correspondingly, the Mugu locale has been documented, both archaeologically and ethnographically, as the center of a considerable amount of aboriginal activity (ibid.).

With reference to the East Area One Specific Plan study area, it is apparent from various records (see Kroeber 1925; Brown 1967; Applegate 1974, 1975; King 1975) that the villages in this region tended to be localized in two general areas: along the coast, per se, and along the major drainages (specifically, the Santa Clara and Sespe Rivers and Santa Paula Creeks). The nearest recorded historical villages to the project area, accordingly, are *Sa'aqtik'oy*, at modern Saticoy; *Mupu*, in Santa Paula along Santa Paula

Creek, on the modern campus of Thomas Aquinas College; *Malalal*, near the confluence of the Santa Clara River and Sespe Creek, putatively in old Sespe Village on the northwest side of this confluence; and *Seqpe*, up Sespe Creek from the Santa Clara. Each of these villages is a considerable distance from the study area, and thus a considerable distance from areas of known historical Chumash occupation.

2.2 Archaeological Background

The archaeological basis for the regional prehistoric sequence in Ventura County lies ultimately in the research of David Banks Rogers (1929), who worked on the Channel Islands and along the Santa Barbara coastline. William J. Wallace (1955) subsequently modified the terminology of Rogers' scheme, and improved with additional and more detailed data and radiocarbon dates. More recently, King (1981) has suggested certain refinements to Wallace's proposed framework.

Wallace's chronology for southern coastal California includes four time periods, the earliest of which (Early Man/Big Game Hunting period) was considered speculative, and thought to correlate with the end of the Pleistocene. Although it is likely that occupation of the southern California coastal region occurred during this early time period, to date the only evidence of such has been limited to a few discoveries of fluted projectile points, found in isolated locales. However, the characteristic geomorphological instability of the California coastline, combined with the major change in erosional/degradational regimes that occurred at the end of the Pleistocene, does not favor the preservation of remains from this or earlier period (Whitley and Dorn 1993).

With the transition towards a modern environment, starting approximately nine to ten thousand years ago, however, an adaptation referred to as the Early Millingstone period (or Early Horizon) began and is evident in the archaeological record. Most sites of this stage date between 8500 and 3500 years in age, and are dominated by assemblages containing large numbers of groundstone artifacts, along with crude choppers and other core/cobble tools. These are thought to represent an adaptation to gathered foods, especially a reliance on hard-shelled seeds.

More recently, it has been suggested that scraper planes, in particular, may have served in the processing of agave (Kowta 1969; Salls 1985); that the association of groundstone and core/cobble tools represents a generalized plant processing toolkit, rather than one emphasizing hard-seeds, per se (Whitley 1979), and one that was used in appropriate environmental settings throughout the prehistoric past; that is, that the so-called 'early millingstone toolkit' is environmentally rather than chronologically specific and reflects localized exploitation patterns, rather than a wide-ranging adaptational strategy (Leonard 1971). However, on the coastal strip, per se, there continues to be evidence that such sites date to the earlier end of the time-frame, and they are generally located on terraces and mesas, above the coastal verge.

Recent studies by Erlandson (1988; see also Erlandson and Colton 1991) provide evidence of a significant, even if small, population of coastal hunter-gatherers in the region before 7000 years ago, or at the beginning of the Early Millingstone period. Erlandson has shown that these were neither "big game" hunters, nor specialized, hard-seed gatherers, but instead generalized foragers that relied on a variety of different kinds of terrestrial, coastal and marine resources, and that they were adapted to estuarine embayments that have long since disappeared from the local environment. Further, his evidence indicates that their primary protein sources were shellfish and other marine resources. Extending a pattern first identified by Meighan (1959) on the Channel Islands, in other words, this suggests that the adaptation to the seashore is a very ancient and long-lived tradition in local prehistory.

Following the Early Millingstone, a transitional stage, referred to as the Intermediate (or Middle) Period, occurred. It is believed to have gotten underway about 3500 years ago, and to have lasted until about A.D. 1000. It is marked on the coast by a growing exploitation of marine resources, the appearance of the hopper mortar and stone bowl/mortar, and a diversification and an increase in the number of chipped stone tools. Projectile points, in particular, are more common at sites than previously, while artifacts such as fish hooks and bone gorges also appear. Further, there is substantial evidence that it was at the beginning of this Intermediate period that inland sites, such as those found in the Conejo

Corridor on the north side of the Santa Monica Mountains, were first established and occupied, suggesting the exploitation of more varied environments and perhaps an increase in population (Whitley and Beaudry 1991), as well as a movement of coastal sites down towards the beaches. In general, however, the Intermediate period can be argued to have set the stage for the accelerated changes that took place immediately following it.

With the transition to the Late Prehistoric period at A.D. 1200, which followed the introduction of the bow and arrow at about A.D. 500 and represented by a major reduction in the size of projectile points, we can correlate local prehistory with Chumash society as described (even if in abbreviated form) by early chroniclers and missionaries. However, this is not to suggest that society was in any way static, for the transition to the Late Prehistoric period was marked by the evolution and eventual dominance of a sophisticated maritime economy. Further, the rise in Chumash social complexity has been shown to have been associated with the development of craft specialization, involving the use of standardized micro-drills to mass produce shell beads on Santa Cruz Island (Arnold 1987), and to have occurred during the Late Prehistoric period.

2.3 Historical Background

The missionization and Spanish colonization of the Ventura County region altered traditional Chumash society irrevocably. Although Juan Rodriguez Cabrillo stopped in the area in A.D. 1542 while exploring the coast, and Sebastián Vizcaíno sailed-by in 1602 (Bancroft 1963), this historical period effectively began with the passing of the Gaspar de Portolá expedition through the area in 1769 - 1770 (Bolton 1971; Boneu 1983). Portolá was followed in quick succession by a number of other explorers, such as Juan Bautista de Anza in 1775-1776 (Bolton 1931) and José Longinos Martinez in 1792 (Simpson 1938). However, it was the establishment of the Mission of San Buenaventura, at modern Ventura, in 1782 (Triem 1985) that truly spelled the end of the aboriginal period.

The study area, per se, is located relatively close to the original Ventura mission in modern terms, but in earlier times was some distance from the

mission proper. It was not until 1840, in fact, that any significant evidence for historical use of the general region surrounding the study areas occurred. On April 28 of that year, Governor Juan B. Alvarado granted the 17,733.33 acres Rancho Santa Paula y Saticoy to Manuel Jimeno Casarin. This rancho was patented to John P. Davidson, James Blair, Stephen M. Tebbets, Joseph B. Crockett and Edward D. Baker in 1872 (Robinson 1956).

The town of Santa Paula developed shortly thereafter, stimulated by three factors: citrus farming; the development of oil production in the region; and the arrival of the Southern Pacific Railroad, in 1887 (Triem 1985).

The development of the citrus industry was the impetus for the creation of the Limoneira Company, established in 1893 by Wallace Hardison and Nathan Blanchard, who had demonstrated great local success at citrus farming. Their initial investment was a 400 acres tract that was five miles west of Santa Paula. In order to adequately irrigate this property, they also acquired the water rights to Santa Paula Creek. In 1896, Hardison enlisted his nephew, Charles C. Teague, to manage his California business affairs while he pursued a South American mining interest. With some effort, Teague consolidated his uncle's various business holdings, and put the Limoneira Company on the road to financial success (Teague 1944).

Blanchard retired in 1898 and was replaced by Teague, then 25 years old, as Limoneira manager, a position Teague held until 1950. (In 1904 he also became part owner and in 1917 company president.) Under Teague's direction, Limoneira became one of the largest lemon producers in the world. The company was also instrumental in revolutionizing the industry. Teague was responsible for developing fruit storage and curing techniques that allowed for the sale of fruit, picked in the winter/spring, during the height of the summer, when prices were highest. He also oversaw the development of practical and efficient orchard heaters and fruit washers. And he was a major force in the development of cooperative marketing, for the both the citrus and the walnut industries (ibid).

Limoneira developed orchards east and west of Santa Paula, resulting in the largest amount of acreage in the world devoted to citrus (Triem

1985). The East Gateway Specific Plan study area was farmed by Teague and his partner, Charles McKevevett, and by 1911, 193 acres of lemons was planted in what is now known as East Area One; the size of the average citrus farm at that time, in great contrast, was only 15 acres (ibid).

Charles Teague published his autobiography, *Fifty Years a Rancher*, in 1944. Although it contains some personal details of his early years, it is primarily an account of his involvement in the development and growth of the citrus and walnut industries. Befitting the fact that the Limoneira Company was the largest producer of lemons in the first few decades of the twentieth century, Teague's impact and influence were not just local, but in fact national. He was awarded an honorary doctorate of law by the University of California in 1924, and was appointed to the Federal Farm Board in 1929, based on a personal plea from President Herbert Hoover. Teague arguably can be cited as Ventura County's most prominent and influential citizen, certainly for the first half of the twentieth century if not for the century in its entirety. The East Gateway Specific Plan study area has thus been in continuous use for farming since the beginning of the 20th century.

3.0 ARCHIVAL RECORDS SEARCH

An archival records search was conducted at the California State University, Fullerton, Archaeological Information Center (AIC), by AIC staff members to determine: (i) if prehistoric or historical archaeological sites had previously been recorded within the East Gateway Specific Plan study area; (ii) if the project area had been systematically surveyed by archaeologists prior to the initiation of this field study; and/or (iii) whether the region of the field project was known to contain archaeological sites and to thereby be archaeologically sensitive. The complete results of this archival record search are included in this document as Appendix A.

Files and records at the AIC indicate that a records search was conducted for the study area in 1997, but that no sites had been recorded at that

time. Furthermore, no prehistoric sites had been recorded within the immediate vicinity of the study zone. The only previously recorded sites in the general vicinity are the Telegraph Road bridge (56-152833) over Santa Paula Creek, built in 1940, a prehistoric site (56-001792) which is located 1/2 mile to the north and four historic sites all of which are located over a 1/4 mile north of the study area.

Examination of historical maps (specifically, Santa Paula, CA 1903 and 1947 15' series USGS topographical quadrangles) indicates that no structures were present within the study area over 100 years ago or by the immediate post-war period.

In summary, the archival records search indicated that the project area had never been surveyed previously. No prehistoric archaeological sites had been identified at that time and historical maps revealed that no structures were present as of 1947.

4.0 FIELD SURVEY

An intensive archaeological field survey of the East Gateway Specific Plan study area, Ventura County, was conducted by a W&S Consultants in November, 2011. The crew members included Joseph M. Simon and Michael Hakim. The ground surface was examined with the crew spaced at 5 - 10 meter intervals, walking transects across the study area to identify artifacts or other archaeological indicators that might be present on the ground surface. In addition, cut-banks of arroyos (where visible) and rodent hole back-dirt piles were also examined to ascertain whether buried archaeological deposits might be present.

5.0 SURVEY RESULTS

The East Gateway Specific Plan study area consists of a vacant lot to the

north of Highway 126 and a broad alluvial plain to the south which is located immediately west of a drainage ditch and the existing channel of Haun Creek. The confluence of Haun Creek and the Santa Clara River is located due south of the study area.

Field survey found that the entire study area had been farmed. Based on historical records, farming has occurred for the last century, although this has involved row crops rather than orchards. Most of the study area was found to have been recently planted with row crops (cabbage sprouts) at the time of the survey and ground surface visibility was hence excellent. The 27.4 acre study area had been cultivated for many years and some surficial grading had occurred along a drainage ditch which is located on the eastern edge of the subject property.

The intensive Phase I archaeological survey of the 27.4 acre East Gateway Specific Plan study area, failed to find any evidence of unrecorded archaeological sites, either prehistoric or historical in nature.

6.0 RECOMMENDATIONS

An archival records search, background studies, and an intensive, on-foot surface reconnaissance of the 27.4 acre East Gateway Specific Plan study area in Ventura County, California, were conducted as part of a Phase I archaeological survey. No sites of any kind had been recorded within the study area, and none were observed during the survey.

Following CEQA, therefore, development of the 27.4 acre East Gateway Specific Plan study area does not have the potential to result in adverse impacts to cultural resources. We recommend no additional archaeological work for this property. In the unlikely event that archaeological resources are uncovered during grading or construction, however, we recommend that an archaeologist be contacted to evaluate the discovery.

RE: Records Search for a Phase I archaeological resource survey of the East Gateway Project (95 ac.) in Ventura County, California.

Dear Mr. Simon,

As per your request received on October 17, 2011, a records search was conducted for the above referenced project. The search includes a review of all recorded archaeological sites within a 1/2-mile radius of the project site as well as a review of cultural resource reports on file. In addition, the California Points of Historical Interest (PHI), the California Historical Landmarks (CHL), the California Register of Historical Resources (CR), the National Register of Historic Places (NR), and the California State Historic Resources Inventory (HRI) listings were reviewed for the above referenced project. The following is a discussion of the findings.

Santa Paula, CA USGS 7.5' Quadrangle

ARCHAEOLOGICAL RESOURCES:

Five archaeological sites (56-001792, 56-001793, 56-001794, 56-001795, and 56-001796) have been identified within a 1/2-mile radius of the project site. No archaeological sites are located within the project site. No sites are listed on the Archaeological Determination of Eligibility (DOE) list. No isolates have been identified within a 1/2-mile radius of the project site. No isolates are located within the project site.

HISTORIC RESOURCES:

One additional cultural resource (56-152833*) has been identified within a 1/2-mile radius of the project site. No cultural resources are located within the project site.
(* = Located within the project site)

Copies of our historic maps – Santa Paula, CA (1903 & 1947) 15' USGS - are enclosed for your review.

The California Point of Historical Interest of the Office of Historic Preservation, Department of Parks and Recreation, lists no properties within a 1/2-mile radius of the project site.

The California Historical Landmarks of the Office of Historic Preservation, Department of Parks and Recreation, lists one property within a 1/2-mile radius of the project site (**see below**).

No.727 Portola Expedition Campsite

On August 11, 1769, the Portola Expedition arrived at the junction of the Arroyo Mupu and Santa Paula Creek, at a place they named the Holy Martyrs Ipolito and Cassiano. The priests of the Mission San Buenaventura here established the Asistencia Santa Paula, where they held services for the Mupu Indians. Located at Santa Paula Boys Club Recreation Center in the 1400 block of Harvard Boulevard, Santa Paula.
56-152322

The California Register of Historical Resources lists no properties within a 1/2-mile radius of the project site. These are properties determined to have a National Register of Historic Places Status of 1 or 2, a California Historical Landmark numbering 770 and higher, or a Point of Historical Interest listed after 1/1/1998.

The National Register of Historic Places lists no properties within a 1/2-mile radius of the project site.

The California Historic Resources Inventory lists thirty nine properties that have been evaluated for historical significance within a 1/2-mile radius of the project site (**see enclosed list**).

PREVIOUS CULTURAL RESOURCES INVESTIGATIONS:

Seventeen studies (VN396*, VN410*, VN613, VN1102*, VN1166*, VN1213*, VN1265*, VN1672*, VN1800*, VN1801*, VN2259*, VN2420, VN2596*, VN2707, VN2793, VN2864*, and VN2917) have been conducted within a 1/2-mile radius of the project site. Of these, twelve are located within the project site. There are thirteen additional investigations located on the Santa Paula, CA 7.5' USGS Quadrangle that are potentially within a 1/2-mile radius of the project site. These reports are not mapped due to insufficient locational information.

(* = Located within the project site)

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you **do not include** resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at 714.278.5395 Monday through Thursday 9:00 am to 3:30 pm.

Should you require any additional information for the above referenced project, reference the SCCIC number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Sincerely,
SCCIC

Lindsey Noyes
Staff Researcher

Notes:

California Historical Resource Status Codes

1 Properties listed in the National Register (NR) or the California Register (CR)

- 1D Contributor to a district or multiple resource property listed in NR by the Keeper. Listed in the CR.
- 1S Individual property listed in NR by the Keeper. Listed in the CR.

- 1CD Listed in the CR as a contributor to a district or multiple resource property by the SHRC
- 1CS Listed in the CR as individual property by the SHRC.
- 1CL Automatically listed in the California Register – Includes State Historical Landmarks 770 and above and Points of Historical Interest nominated after December 1997 and recommended for listing by the SHRC.

2 Properties determined eligible for listing in the National Register (NR) or the California Register (CR)

- 2B Determined eligible for NR as an individual property and as a contributor to an eligible district in a federal regulatory process. Listed in the CR.
- 2D Contributor to a district determined eligible for NR by the Keeper. Listed in the CR.
- 2D2 Contributor to a district determined eligible for NR by consensus through Section 106 process. Listed in the CR.
- 2D3 Contributor to a district determined eligible for NR by Part I Tax Certification. Listed in the CR.
- 2D4 Contributor to a district determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
- 2S Individual property determined eligible for NR by the Keeper. Listed in the CR.
- 2S2 Individual property determined eligible for NR by a consensus through Section 106 process. Listed in the CR.
- 2S3 Individual property determined eligible for NR by Part I Tax Certification. Listed in the CR.
- 2S4 Individual property determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.

- 2CB Determined eligible for CR as an individual property and as a contributor to an eligible district by the SHRC.
- 2CD Contributor to a district determined eligible for listing in the CR by the SHRC.
- 2CS Individual property determined eligible for listing in the CR by the SHRC.

3 Appears eligible for National Register (NR) or California Register (CR) through Survey Evaluation

- 3B Appears eligible for NR both individually and as a contributor to a NR eligible district through survey evaluation.
- 3D Appears eligible for NR as a contributor to a NR eligible district through survey evaluation.
- 3S Appears eligible for NR as an individual property through survey evaluation.

- 3CB Appears eligible for CR both individually and as a contributor to a CR eligible district through a survey evaluation.
- 3CD Appears eligible for CR as a contributor to a CR eligible district through a survey evaluation.
- 3CS Appears eligible for CR as an individual property through survey evaluation.

4 Appears eligible for National Register (NR) or California Register (CR) through other evaluation

- 4CM Master List - State Owned Properties – PRC §5024.

5 Properties Recognized as Historically Significant by Local Government

- 5D1 Contributor to a district that is listed or designated locally.
- 5D2 Contributor to a district that is eligible for local listing or designation.
- 5D3 Appears to be a contributor to a district that appears eligible for local listing or designation through survey evaluation.

- 5S1 Individual property that is listed or designated locally.
- 5S2 Individual property that is eligible for local listing or designation.
- 5S3 Appears to be individually eligible for local listing or designation through survey evaluation.

- 5B Locally significant both individually (listed, eligible, or appears eligible) and as a contributor to a district that is locally listed, designated, determined eligible or appears eligible through survey evaluation.

6 Not Eligible for Listing or Designation as specified

- 6C Determined ineligible for or removed from California Register by SHRC.
- 6J Landmarks or Points of Interest found ineligible for designation by SHRC.
- 6L Determined ineligible for local listing or designation through local government review process; may warrant special consideration in local planning.
- 6T Determined ineligible for NR through Part I Tax Certification process.
- 6U Determined ineligible for NR pursuant to Section 106 without review by SHPO.
- 6W Removed from NR by the Keeper.
- 6X Determined ineligible for the NR by SHRC or Keeper.
- 6Y Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing.
- 6Z Found ineligible for NR, CR or Local designation through survey evaluation.

7 Not Evaluated for National Register (NR) or California Register (CR) or Needs Reevaluation

- 7J Received by OHP for evaluation or action but not yet evaluated.
- 7K Resubmitted to OHP for action but not reevaluated.
- 7L State Historical Landmarks 1-769 and Points of Historical Interest designated prior to January 1998 – Needs to be reevaluated using current standards.
- 7M Submitted to OHP but not evaluated - referred to NPS.
- 7N Needs to be reevaluated (Formerly NR Status Code 4)
- 7N1 Needs to be reevaluated (Formerly NR SC4) – may become eligible for NR w/restoration or when meets other specific conditions.
- 7R Identified in Reconnaissance Level Survey: Not evaluated.
- 7W Submitted to OHP for action – withdrawn.
